

MAKE YOUR OWN STATIC ELECTRICITY!

Static electricity is pretty cool. It can even make your hair stand on end! Try experimenting with making your own static electricity by following the instructions below.

What to do

- 1 Rub a balloon back and forth on your hair and then slowly pull it away. Ask a friend what happens, or look in a mirror if there's nobody around.
- 2 Place the aluminium can on its side on a table. Rub the balloon on your hair and hold it close to the can. What happens next? Slowly move the balloon away from the can, and see what it does...

Materials

2 INFLATED BALLOONS

ALUMINIUM CAN
