

# Northern electricity distribution network

## Price schedule for general consumers

Applicable from 1 April 2016

This schedule describes Vector’s standard prices for providing electricity distribution services in respect of general consumers on the Northern network. Vector offers three price categories for general consumers on the Northern network depending on the consumer’s metering type.

### General consumer definitions

A general consumer is where the consumer is not a residential consumer (as defined in Vector’s price schedule for residential consumers) and the consumer’s point of connection has a capacity less than or equal to 69kVA.

The network that consumers are supplied from is determined by Vector from time to time based on the physical location of the point of connection of the consumer’s electrical installation. The approximate area covered by the Northern electricity distribution network is shown in green on the following map.

### Distribution prices and pass-through and recoverable cost prices

In the following pricing tables the “Delivery Price” column represents the Tariff Rate for Distribution Services and is the sum of the following components:

- “Dist. Price” is an indicative value for the distribution component of prices. These relate to

Vector’s costs of owning and operating our network; and

- “Pass. Price” is an indicative value for the pass-through and recoverable component of prices which relates to the costs from third parties including but not limited to: Council rates, Electricity Authority, Commerce Act and Electricity and Gas Complaints Commissioner levies, and transmission charges from Transpower.

### General metered price category WBSN

The WBSN price category is available to general consumers where the consumer has a metered point of connection.

Price category WBSN					
Description	Code	Units	Dist. Price	Pass. Price	Delivery Price
Fixed	WBSN-FIXD	\$/day	0.9900	-	0.9900
Volume	WBSN-24UC	\$/kWh	0.0255	0.0380	0.0635
Volume, injection	WBSN-INJT	\$/kWh	-	-	-

- The fixed price (WBSN-FIXD) applies to the number of days each WBSN general consumer’s point of connection is energised.
- The volume price (WBSN-24UC) applies to all electricity distributed to each WBSN general consumer.
- The volume injection price (WBSN-INJT) applies to all electricity injected into the network by each WBSN general consumer.

### General metered half hourly price category WBSH

The WBSH price category is available to general consumers who are on a qualifying retail price option with metering capable of recording half hourly data.

Price category WBSH					
Description	Code	Units	Dist. Price	Pass. Price	Delivery Price
Fixed	WBSH-FIXD	\$/day	0.9900	-	0.9900
Volume, off-peak	WBSH-OFPK	\$/kWh	0.0255	-	0.0255
Volume, peak	WBSH-PEAK	\$/kWh	0.0255	0.1000	0.1255
Volume, injection	WBSH-INJT	\$/kWh	-	-	-

- The fixed price (WBSH-FIXD) applies to the number of days each WBSH general consumer's point of connection is energised.
- The volume off-peak price (WBSH-OFPK) applies to electricity distributed to each WBSH general consumer during off-peak periods.
- The volume peak price (WBSH-PEAK) applies to electricity distributed to each WBSH general consumer during peak periods.
- The volume injection price (WBSH-INJT) applies to all electricity injected into the network by each WBSH general consumer.

### Peak and off-peak periods for half hourly price categories

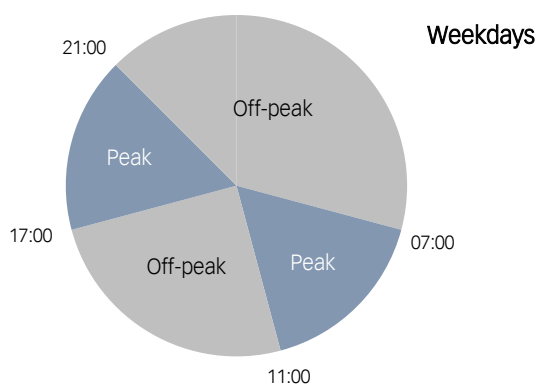

Peak periods occur on:

- Weekdays (Monday to Friday including public holidays) from 07:00 to 11:00 (time periods 15 to 22) and 17:00 to 21:00 (time periods 35 to 42).

Off-peak periods occur on:

- Weekdays (Monday to Friday including public holidays) from 11:00 to 17:00 (time periods 23 to 34) and 21:00 to 07:00 (time periods 43 to 14) the following day; and
- Weekends (Saturday and Sunday).

The following chart shows the times on weekdays to which the peak and off-peak volume prices apply for the WBSH price category:

### Qualifying retail price options for half hourly price categories

Vector will determine whether a retail price option qualifies for Vector's half hourly price categories, following an application by a retailer, based on the extent that Vector's distribution price signals are incorporated into the retail option and the number of consumers affected.

### General unmetered price category WBSU

The WBSU price category applies to general consumers where the consumer's point of connection does not have a meter measuring consumption, has a capacity less than 1kVA and consists of fixed wired equipment with a predictable annual electricity usage. Where any of these criteria are not met, the consumer will be required to install a meter and will be placed on the appropriate metered price category.

Price category WBSU					
Description	Code	Units	Dist. Price	Pass. Price	Delivery Price
Fixed	WBSU-FIXD	\$/day/fitting	0.1500	-	0.1500
Volume	WBSU-24UC	\$/kWh	0.0320	0.0380	0.0700

- The fixed price (WBSU-FIXD) applies to the number of days each WBSU unmetered consumer's unmetered point of connection or fitting is energised.
- The volume price (WBSU-24UC) applies to all electricity distributed to each WBSU unmetered consumer's point of connection or fitting.
- Consumption for WBSU non-streetlight unmetered consumers is determined by Vector based on load profile and fitting input wattages. A minimum load factor of 1.1 is applied to the input wattage for non-streetlight appliances and 1.0 for streetlight appliances.
- Consumption for WBSU streetlight unmetered consumers is determined by multiplying the input wattage of each fitting in a database administered by Vector, with the load factor, the number of days in each month and the night hours per day stated in the following table:

Month	Night hours per day
January	9.61
February	10.57
March	11.61
April	12.87
May	13.81
June	14.33
July	14.13
August	13.29
September	12.17
October	11.00
November	9.93
December	9.32

## Consumer capacity

The capacity used to allocate consumers to a price category is based on the nearest standard capacity of each consumer's point of connection as determined by Vector subject to the following conditions:

- Vector may require the consumer's demand not to exceed the capacity of their point of connection at any time;
- Changes to the capacity of the consumer's point of connection may be requested by the retailer;
- Any change to the consumer's capacity requires the current limiting device (such as a fuse or transformer) to be changed by Vector to the nearest standard capacity;
- Vector may pass some or all of the costs associated with the change in capacity on to the retailer (including removal of stranded assets such as transformers); and
- Changes to the consumer's capacity are subject to the agreement of Vector and the availability of spare capacity on Vector's network and may be subject to additional charges (such as capital contributions).

## Extent of prices

Vector's prices published in this schedule relate to the cost of owning, operating and maintaining the distribution network as it currently exists but do not include amongst other things, energy charges for the electricity consumers use, metering equipment charges, load control equipment located at the point of connection to the network, the cost of reading meters and the cost of consumer electrical installations or fittings.

In order for Vector to supply any new or changed distribution service, including but not limited to; changes to service standards, distributed generation, the connection to the network of additional points of connection and the modification, increased capacity, relocation or removal of current points of connection,

Vector may apply non-standard prices other than those outlined in this schedule, or require a capital contribution on a case by case basis.

Vector's prices do not include ancillary service charges and loss constraint excess payments from the system operator and transmission provider respectively. These costs may be passed through by Vector directly to electricity retailers.

Should Vector forecast a potential price breach under the regulated price path, then Vector may provide a refund or rebate of electricity distribution charges directly to the electricity retailer in order to avoid such a breach.

All prices are exclusive of GST.

## Provision of billing information

The consumer's retailer must provide Vector with consumption data for each general consumer and for each price as described in this schedule.

Where more than one meter at a point of connection is in use, but a single volume price applies, consumption data must be aggregated by the retailer before submitting to Vector.

Where a half hourly meter is fitted, consumption data must be aggregated by the retailer to match the appropriate prices and time periods before submitting the data to Vector.
